active
learning
spaces.

insights, applications & solutions

Steelcase
Education Solutions
every space is a learning space.
The changes converging on campus are extraordinary. There’s a new generation of students, Gen Y, with different experiences and expectations than their boomer parents. They’re savvy and comfortable with technology, and typically carry an array of technology with them. They’re also very demanding of their education, being fully aware of the global economy and the competition it represents.

Rapidly changing technology continually offers new approaches to learning and instruction. From digitized content to interactive technologies, education often defines the cutting-edge use of technology.

At the same time, multiple pedagogies are being employed at every level of education. Many instructors are embracing a more active—and interactive—style of instruction, engaging with students, leveraging technology and exploring more varied educational approaches.

We’ve arranged this book around the various learning spaces available on campus: classrooms, computer labs, libraries, lounge areas, cafés, faculty offices and administrative offices.

Each section includes a quick overview of the issues regarding the space, considerations for designing better spaces and signature applications. Quotes from our research, stories from actual users and detailed product pages are also included. It’s a survey course, if you will, in how to plan learning spaces for a changing educational landscape.

Educators prepare students for their future, but it’s often difficult to imagine what the future will be like in a world of constant change.

These changes present a challenge to successfully teaching 21st century skills in inadequate facilities. With enrollments on the rise and budgets holding steady or declining, it’s more important than ever to make every space an active learning space. Properly designed and furnished, every space can take advantage of the opportunities represented by continual change.

Rampant change across campuses presents a challenge: successfully teaching 21st century skills in inadequate facilities.

Steelcase has studied for years, employing a unique, human-centered design research process. Recently, for example, we completed an in-depth study at a number of universities across North America, including public, private and community colleges. We are also engaged in various studies with schools at all levels, from kindergarten through postsecondary, observing educators at work and testing design principles, product ideas and applications. We’re going to school practically every day, listening and learning, working with teachers, students and administrators to create new, innovative, active learning spaces.

**PROTOTYPE**
- build full-scale models
- run simulations

**MEASURE**
- conduct experiments
- provide feedback
- test and test
classroom: the case for change.

what we observed

The majority of classrooms in use today were built for traditional, "chalk-n-talk" pedagogies and passive learners, not for today’s active learning approaches. Inflexible layouts and furniture with limited mobility hamper interaction among students, instructors, and content. Technology access is highly variable from classroom to classroom and often poorly integrated. Instructors and students cannot easily leverage technology—either built-in or portable—to support problem-based pedagogies and hands-on learning. Many schools are reconsidering how space, technology, and pedagogies can be better integrated for a greater impact on teaching and learning.
No learning space is more in need of fresh design thinking than the classroom. Given its pivotal role, architects, designers and educators are reconsidering a new classroom paradigm where technology and the physical space are integrated to support pedagogy and create a more active and engaging experience for instructors and students.

Our research shows that this new classroom approach can be successfully implemented in facilities of any age, from refurnished rooms in old buildings to renovated spaces, as well as in new construction. The problem has been that pedagogy, technology and space have not been considered equally in classroom planning.

For example, the allure of technology has overwhelmed pedagogy and space in many computer lab classrooms: rows of computers on fixed work-surfaces force each student to face a computer screen. It’s a modern-day version of the traditional lecture-style classroom and offers little support for collaboration, teamwork and interactive learning.

Or consider a classroom developed primarily around the building orientation, windows and natural light. A welcoming space, perhaps, but viewing a whiteboard, a projection or computer screen in such a bright lit space is all but impossible.

The default classroom design—a rectangular box filled with rows of desks facing the instructor and writing board—is ubiquitous. Administrators, faculty, architects and donors attended schools with classrooms just like this one. It’s what they know. As a result, today’s students and teachers suffer because these outmoded classrooms inadequately support the integration of the three key elements of a successful learning environment.

As more schools adopt constructivist teaching pedagogies, the “sage on the stage” is giving way to the “guide on the side.” The classroom needs to support instructors moving among teams to provide real-time feedback and direction and support students in peer-to-peer learning.

Pedagogy, technology and space, when carefully considered and intentionally designed, can establish new protocols for advanced learning environment solutions.

Change begins with pedagogy. Teachers and teaching methods are diverse and evolving. Classes today employ lecture mode, group setups and individual work. From one class to the next, sometimes during the same class period, classroom needs change. Thus, the classroom should easily and quickly adapt to different teaching and learning preferences.

Technology needs careful integration. Students today are digital natives, comfortable using technology to display, share and present information. Vertical surfaces to display content, multiple projection surfaces and whiteboards in various configurations are all important classroom considerations.

Many faculty members are digital immigrants. This divide often causes concerns for faculty members who are untrained and uncomfortable when asked to develop instructional design protocols for truly engaging learners.

Space impacts learning. Nearly three-quarters of classes include class discussions and a quarter of all classes include group projects, and those percentages are continuing to grow. Interactive pedagogies require learning spaces where everyone can see the content, and see and interact with others. Every seat can, and should, be the best seat in the room.

More people are teaching than just the faculty. As more schools adopt constructivist teaching pedagogies, teaching pedagogies, the “sage on the stage” is giving way to the “guide on the side.” The classroom needs to support instructors moving among teams to provide real-time feedback and direction and support students in peer-to-peer learning.

Pedagogy, technology and space, when carefully considered and integrated, define the new classroom. When the space, furniture and technology can readily adapt to the pedagogies and learning preferences of each term, and the classroom effectively supports how instructors teach and students learn, classroom planners and designers will have made a significant contribution to the educational process.

What we heard.

“I bring a lot of stuff to class. And I use a lot of it—it’s not the old days, when we would just take notes in a notebook; it’s a multimedia and social experience. There aren’t a lot of classrooms that work for me.”

STUDENT

“We replaced typical cookbook experiments with guided inquiry exercises that encourage students to think and work as a group rather than follow recipes with predetermined results. These exercises develop skills that better prepare them for future work and give them the tools to help them retain knowledge long after the semester ends.”

PROFESSOR
Movement is key to active learning. When students can move about easily, they are more interactive, collaborative, comfortable and engaged in class. Node seating reinvents the classroom chair, allowing easy movement between lecture-based and team-based modes, and providing a worksurface and storage wherever it goes.

tips for new classrooms.

These tips for planning and designing new classroom environments have been developed with the Steelcase Human-Centered Design Research Process, conducted at schools and colleges across the U.S. and Canada. They are intended to provide some guiding tenets to those who plan higher education spaces, assisting in the design of more interactive and flexible learning spaces.

PEDAGOGY
- Design to support quick transitions among multiple teaching modes: lecture, team project, discussion, etc.—from passive to active engagement.
- Design for peer-to-peer learning.
- Allow freedom of movement for the instructor, enabling a “visit” with each group to offer quick assessment.

TECHNOLOGY
- Design for sharing, leveraging both vertical and horizontal surfaces for display using projection and interactive surfaces.
- Take advantage of new media, including personal and in-room technology, and offer equal access to both.
- Allow for displayed information to be persistent over time.

SPACE
- Design for visual and physical access, giving every student the best seat in the house and allowing the instructor and student access to each other.
- Design for quick ownership change, so classrooms adapt to changing users and varying class requirements.
- Design to support quick reconfiguration among multiple modes: from lecture to project work to discussion and test taking.
application ideas: classrooms.

These are classrooms outside the traditional box of rows of fixed tablet chairs and a lectern. Here you will find learning spaces that can easily morph from lecture mode to teamwork to group presentation and discussion, and back again. Every seat is the best seat. Access to content, students and instructors—available for all. Smart technology is integrated in smart ways so everyone can use it. These are classrooms that engage and inspire by putting control of the learning space in the hands of students and instructors.
media:scape LearnLab

Combining innovative LearnLab design with unique media:scape technology creates the opportunity for three distinct modes of sharing of digital content: small team co-creation, group sharing and lecture and discussion with the entire class.

LearnLab provides multiple stages where instructors can engage with students.

Small team breakouts occur at the table in the classroom, eliminating the need to move to another location.

media:scape integrates furniture and technology to let instructors and students share digital information quickly.

node classroom configuration 1: large-group discussion mode

Keep students more engaged and help instructors conduct whole-class discussions with classroom furniture designed for active learning. node seating is key to this more flexible and comfortable learning environment.

A media:scape LearnLab supports multiple learning styles and different teaching preferences, and offers unprecedented ease in sharing digital content.

media:scape ........................................................126
node chair ..............................................................97
eno interactive whiteboard ...........................127
Huddleboard .......................................................125
Swivel seat, storage base and casters are standard on node. Options include adjustable worksurface, upholstery and glides.

Double up rows to increase class size. node’s swivel seat and mobile casters make it easy for students to have open sight lines to the instructor and other students.

node stool with Airtouch height-adjustable table makes an ideal instructor station.

Lightweight Huddleboards are ideal for small-group content creation and review. Hang on a workrail or easel for presentation to the class.

node classroom configuration 2: small group discussion mode

Switching from lecture mode to small group work and back again is easy with node seating. This classroom uses node chairs with casters and personal worksurfaces, portable Huddleboards and a height-adjustable instructor table (also on casters) for maximum flexibility.

The Huddleboard mobile easel holds up to 10 markerboards so they’re always convenient. Huddleboards weigh less than five pounds each.

node classroom configuration 3: lecture mode

When it’s time for administering a test, presenting material via lecture, or supporting as many students in the room as possible, node readily handles a traditional classroom setup.

This room is set up for a lecture now, but easily reconfigures to handle any teaching style for the next class.

The integrated base on node keeps backpacks and other belongings out of the aisles.

node chairs help students be more comfortable, connected, and engaged in any learning environment.

thin-to-thick classroom

Here’s a classroom that combines mobile, multipurpose tables of varying depths to support multiple learning modes. Students in rows 1, 3 and 5 have shallow tables and can turn around to collaborate at the deeper tables in rows 2, 4 and 6. If groups need to work separately, the tables roll easily to create separate teamwork areas.

Huddleboard markerboards move from workrail to tabletop and back again for easy sharing of information.

Rectangular Groupwork tops are available in three different widths and four different depths.

X-Stack chairs flex at key contact points and move easily on casters. Cupholders and glides are optional.

Eno by PolVision offers a 3-in-1 combination dry-erase board, magnetic board and interactive whiteboard.

Pneumatic height adjustment and adjustable back tension make Kart seating a comfortable, supportive chair for students.

Tables include power and data ports for student technology.

Nesting is easy: pull the handle on the table and the legs rotate in automatically. Simply flip up the seat to nest the chair.

Tables with the L-base provide unobstructed legroom.

nesting classroom

A classroom that grows and shrinks, nests its furniture and supports a variety of learning modes in the same space.
Inspired by our research findings and the input of instructors and students, Steelcase created node, a chair designed to support the many modes of learning and teaching. Every aspect of node’s design was focused on creating a chair for the active learning in today’s classroom.

node’s impact on the classroom experience was evaluated in pre- and post-installation studies at the University of Michigan. The two-month study was conducted in a nondedicated general-use classroom used for a variety of classes and by various instructors and students. Students and faculty praised the node chair for its comfort, storage and ease of movement, while faculty reported significant improvement in their ability to reach and engage students in an active learning environment.

It was node’s mobility and how it affects the classroom’s performance that made most instructors stand up and take notice. “The biggest thing was the mobility,” said Rachel Crisco, a French language and culture instructor at U-M. “I do a lot of group work, and I like to have them move around to work with different classmates. I also like the students to face each other for conversation, and the swiveling ability makes that easy to do,” said Crisco.

Where instructors were once isolated at the front, in a node classroom they moved easily and frequently among their students. And instead of being locked into the existing static configuration of their desks, students could now swirl or “scoot” to work in pairs or groups, often at a moment’s notice from their instructor.

Researchers also observed instructors taking the center of a circle of desks for some instruction sessions and then moving to become “guides on the side” during discussion and project work as students smoothly reconfigured from one segment of class activity to the next. Several instructors reported significant improvement in their ability to reach and engage students in an active learning environment.
computer lab: ready for an upgrade.

what we observed

Gen Y students love technology. And while the trend of more laptops on campus is real, only about a third of students use laptops in the classroom. Why? Too little desk space, no power access, too much to carry around, instructors restrict use during class.

Computer labs are still a draw because students can access expensive, specialized software, and printing is often at reduced or free.

Most computer labs reflect a century-old classroom approach, with rows of small, fixed desks that create a cramped, uncomfortable environment for working independently. Computer labs aren’t built to support the collaborative work of today’s students.

In addition to computer labs, many schools are creating small computer pods and placing them in computer labs, libraries and other buildings throughout the campus.
computer spaces for technology and users.

Ever since desktop computers first arrived on campuses in the 1980s, colleges have offered dedicated computer spaces for students. Today, laptops are part of most students’ arsenal, smartphones pack the computing power of a laptop and wi-fi makes content available anywhere. So what’s the role of the computer lab today?

Students are drawn to computer labs for several reasons. College computers have program-specific software that’s often too expensive for students to buy for their own computers. Schools also offer quality printing that’s provided by school equipment for free or at a reduced cost to students.

Others reasons to go to the lab? They’re convenient to classrooms and the library; students need to access heavy-duty computing power (e.g., to run engineering rendering software); project files are stored on the school database (e.g., large video files, art projects, etc.); and students don’t always carry their laptops around, because they’re too heavy or cumbersome, or students just don’t use them in class.

Faculty and staff often use computer labs for training on new software related to course work or on institution-wide learning management systems (e.g., Moodle, Blackboard).

Steelcase research indicates that two types of computer spaces remain popular: computer labs for individual work by students, faculty and staff, and computer pods dispersed in different buildings and used for planned group work and impromptu individual tasks.

Both types of computer labs are calling for an upgrade, making them more effective learning spaces and more ergonomic and comfortable for the long stretches of work that take place there.

what we heard.

“I’m not a fan of computer labs that are just out in the open. I like to have computer labs that are defined specifically as computer labs, because I think that a computer lab is more of a workspace and less of a study space.”

STUDENT

Computer pods. Computer kiosks at standing and seated heights are a common sight on campus, with students checking email, surfing the web or checking their online course sites. Yet many colleges are now finding that students also like using computers in small, seated-height stations that offer enough worksurface to spread out textbooks and notes and to work in groups when needed.

The added worksurface creates a collaborative space where two or three students can huddle together, see the computer screen and work on materials arranged before them.

Proximity is key to locating these pods. Locations in and around cafés, lobbies and entry spaces are typical because they are easily accessible for on-the-go users. Also, adding these pods to library floors designed for more social and collaborative learning activities creates spaces where students can work on the increasing number of group projects assigned to them. The use of large worksurfaces, privacy screens and monitor arms can make these pods even more effective.

Computer labs/commons. Computer labs are typically rectangular in shape and neutral in color, just like the computers they house. Rows of side-by-side, small desks hold the computers and little else. This approach simplifies furniture specification, layout and wiring and cabling but does little for the students who use the labs. They have to work elbow to elbow, with little privacy for what’s on their screens (a commonly articulated annoyance) and little if any worksurface for other materials, books, etc.

Why not make these spaces more effective for both individual and group work? First, consider the different users who work in computer labs and support their various work modes: waiting, quiet discussion and dedicated task work at the computer.

Second, consider ways to allow users to be more active during computer work and thus improve their comfort and well-being.
The node chair with five-star base straddles table bases and rolls easily under and around a variety of tables and table heights, making it easy to pair with existing worksurfaces. The five-star chair is height-adjustable and utilizes the node seat shell, which was designed to provide comfort without upholstery, for durability and ease of cleaning.

Computer pods and labs are not places to warehouse computer equipment. They’re workplaces for students, faculty and staff and should be furnished appropriately. Below are a few tips to consider when designing a computer lab that offers flexibility and comfort.

**Computer Pod**
1. Students work with technology, print materials and other students on group projects; plan pods with enough room for small groups and sufficient worksurface.
2. Screens between adjacent pods provide privacy and define territory.
3. Pods provide the ability to transition between individual work and collaboration.
4. Power outlets support the need for portable technology, ideally at worksurface height.
5. Computer pods are effective when located adjacent to other work areas such as library project workspaces and lounge/collaboration areas.

**Computer Lab / Commons**
1. Basics include adequate legroom, comfortable seating for long work sessions and worksurfaces that hold more than just a keyboard and monitor.
2. Consider benching workspaces instead of freestanding desks; they use real estate efficiently, route wires and cables, and are simple to expand or contract.
3. Provide a means for users to keep their computer screens private (privacy screens, monitor arms).
4. Monitor arms free up worksurface space and allow adjustment of computer screens for a diverse population.
5. Provide multiple power outlets for portable technology—phones, laptops, etc.—to help prevent students from unplugging other equipment to access power.

Learn more at steelcase.com/educationsolutions
These space ideas are not simply for computer labs but also for computer user spaces. Computer pods can be located wherever student traffic dictates, and they help prove the concept that every space can be a learning space. Computer labs/common spaces provide support for a variety of work modes, from waiting and reading to small discussions and, of course, dedicated work sessions with computer equipment.

computer pods

Designed for both individual and collaborative computer work, computer pods let users expand the use of their space as necessary. Students can choose an individual work area or a space for team project work, or move easily between the two areas, as their work requires.

Waiting for an open seat or need relaxed seating for study? This Post and Beam lounge space accommodates both.

The Airtouch adjustable table and Cachet stool fit students of varying sizes and accommodate both stand-up and seated postures.

Answer system solution creates an independent computer pod, offering privacy and wraparound worksurface for individual student work.

When computer pods are connected, students have the freedom to choose whether they want to work alone or collaborate on a project.

learn more at steelcase.com/educationsolutions

learn more at steelcase.com/educationsolutions
There’s a well-equipped computer lab at Central Michigan University’s academic center for its College of Health Professionals, but just as much computer work happens outside the lab in a variety of computer pods, lounge areas, group workspaces and other impromptu huddle areas. These are spaces where students can work individually or in small groups, tap the school’s wi-fi with their own technology or use school-provided computer tools.

The building houses CMU’s health professions, neuroscience and clinical psychology programs and its associated research initiatives in one technologically advanced environment.

“Our vision was to create a structure that would be flexible and inviting, foster a collaborative spirit and provide the latest tools to facilitate optimal student learning,” says Linda Seestedt-Stanford, Assistant Dean of Health Professions and the college’s project manager. “We wanted a building that would encourage active learning, whether it be faculty-to-student or peer-to-peer.”

CMU originally considered built-in furniture for computer labs and student interaction spaces. Working with Steelcase and the Detroit office of architectural firm SmithGroup, they discovered that mobility made more sense.

“What good is having a student interaction area if the students can’t move things around and make it their space? What good is it if they end up not using it?” says Seestedt-Stanford.

The three major components of the health professions programs, clinical, instructional and research occupy building wings connected by a large central atrium designed as a communication corridor. Wi-fi, mobile seating and portable whiteboards augment the computer-friendly workspaces for students.

Off the atrium is a glass-walled computer lab with both banks of computers and 120-degree configuration computer pods for individual or small group work.

“Steelcase helped us see furniture through a different lens and discover new product options and applications that fully supported our overall goals. They helped us think through our issues in the context of their research findings and expertise,” says Seestedt-Stanford.
The library remains a popular location with students. Group learning activities, including project work, are finding their way to the library. Libraries can become the social, collaborative hub of the campus, and still maintain their role as a place for intense study. Anywhere/anytime information access has lessened the need to reference books, so book stacks are being reduced and moved to less prominent locations. Librarian roles are changing: they’re instructors, technology advisors, research assistants and collaborators with students and faculty.
When books were precious, library space was designed for readers and scholars. As printed books became commonplace, collections grew and the library became synonymous with books: an information storehouse. Today, information is digital and the library is a site for teaching, mentoring and collaborative learning, and librarians are active instructors. Students work together on team projects. The library has evolved into a place for all these important social activities.

However, it remains the one place on campus where traditional and new knowledge resources, the latest information technology and skilled instructors as well as fellow students converge in an ongoing process of learning, teaching and research.

To better understand the trends, Steelcase Education Solutions initiated a major study of libraries at 13 public and private colleges and universities across the U.S. The research revealed that the library is becoming a key location outside the classroom where the constructivist pedagogy plays out as students learn to analyze information and create new information, often working in a group. This change represents a great shift for the library from a reading and storage site to a center of interactive learning.

“Colleges and universities have tried different approaches to meet the new demands placed on the library, often creating space adjacencies that hinder rather than help the learning process,” notes Elise Valoe, principal researcher with Steelcase.

For example, growing computer use led many libraries to install computer stations into any available space. However, people disliked having their backs to walkways and screens open for anyone to view.

Group work areas in libraries are often located near individual spaces for quiet study. This frustrates quiet-seeking students working alone, while student teams can’t find the right space and tools for effective collaboration. A better approach might include providing dedicated spaces for both individual and team work in a range of settings spread throughout the library, progressing from free-ranging team spaces to private study spaces.

Our research showed that students tend to work in the library in groups in the evenings (outside of class time) and individually or with one other person during mornings and afternoons. Spaces that work for solo work early in the day have to be flexible enough for teams later on.

In an age of tablet computers and wi-fi, it may be surprising that today’s technology-loving students still love libraries. Steelcase research shows that students love the library because it offers much to the engaged learner:

- a convenient spot between classes
- a place to socialize with others and to be motivated by them
- a site to collaborate on group work
- a space close to many resources
- collections that are on reserve
- the place for computing software, copying, printing, scanning
- a great atmosphere

“Why Students Still Love Libraries”

“On the campus level, the library is the academic soul of a campus, yet its role is changing dramatically. Students can put their hands on information from virtually anywhere, so housing books is no longer a library’s main purpose.”

Librarian

“Our research showed that students tend to work in the library in groups in the evenings (outside of class and work time) and individually or with one other person during mornings and afternoons. Spaces that work for solo work early in the day have to be flexible enough for teams later on.”

Student
Most existing college libraries were designed and built for finding books and checking them out. As today’s library transcends that limited role, three zones have emerged, each with different types of activity. Across these zones, new library spaces must support student collaboration and group work; private study space; computing equipment; access to reserved material; content-creation tools; and support for the varied roles of the new librarian, from content expert to IT service provider and collaborator with students and faculty.

Whether in a new space or a renovation, adjacencies are crucial, including planning for technology use in practically every setting: from team collaborative spaces to social zones to individual study spaces. Visual and acoustical privacy require careful planning.

### COLLABORATIVE ZONE
- Design this zone to support active learning, with tools for sharing analog and digital content.
- Support cocreation of content on computer screens, in print materials, on whiteboards and in other analog materials.
- Provide tools to capture and distribute analog and digital notes, information, and ideas.
- Support the librarian’s expanded role.

### SOCIAL ZONE
- Accommodate group work and the expansion of teams over time.
- Build welcoming reception areas, visual displays and clear paths to library services to help students understand and use the library.
- Provide tools to share both digital and analog resources.
- Provide appropriate worksurfaces for lounge settings.

### FOCUSED ZONE
- Provide for individual comfort, concentration and security.
- Provide ample worksurface space with easy access to power.
- Consider visual and acoustical privacy for individual work.
- Provide for temporary ownership of space.

**tips for a new library ecosystem.**

media:scape merges furniture and technology to help students collaborate, co-create and share ideas more effectively. media:scape boosts collaboration across the table or around the globe—by transforming classrooms, libraries or social spaces connecting students and sharing information seamlessly.
the library ecosystem.

Consider the entire library floor plan when retrofitting any settings, designing with adjacencies in mind. When planning, be sure to support each zone independently and holistically within the entire floor plan.

COLLABORATIVE
The learning experience extends from the classroom to the library, where students meet with classmates to collaborate on group projects. Team workspaces, computer labs and commons, and media sharing spaces are all useful collaborative zones.

SOCIAL
With college course work involving more and more team projects, libraries have become important places for students to work together in a relaxed atmosphere. Social zones includes lounges, cafés and lobby spaces.

FOCUSED
Students often use the library for conducting research, writing papers and studying. Focused work zones can include personal desks, benching applications and lounge areas for concentration and reflection.
team space

By supporting both digital and analog media, this space allows teams to share digital content using media:scape and to manipulate analog information on Huddleboards and around an extensive worksurface. cobi seating, designed specifically for collaborative work, and wall-mounted storage round out an ideal team workspace.

Huddleboard easel holds up to 10 markerboards, versatile tools for team content creation.

media:scape’s dual screens make it easy to share, compare and create digital content.

The web-based room scheduler, RoomWizard, lets students find and reserve team space quickly and easily.

cobi chairs are comfortable for long work sessions because they support different postures automatically.

Focused at the bench

A great space for focused work, benching is simple, space-efficient and adaptable to changing needs. Power and data ports, privacy screens, and ergonomic seating help students focus on individual tasks.

Large worksurfaces accommodate textbooks, notebooks, laptops and other belongings.

FrameOne integrated rail holds worktools, lighting, power and data outlets, and privacy screens.

Screws provide seated privacy and help hold down the noise yet keep students open to others.

FrameOne is simple to expand and contract. Add or subtract worksurfaces or reconfigure at any time.

node chair’s five-star base, height adjustability and tough durability handle long days of use by a variety of users.

social comfort

Gather, connect and discuss in this comfortable lounge setting that’s planned near collaborative spaces. Students can easily transition from conversation to collaboration as needed.

- Book stacks help separate a conversational area from other library zones.
- Tables hold laptops and books and help keep aisles clear.

A new take on the classic club chair, Joel seating invites lounging and conversation. Auto-swivel return is standard.

Private collaboration

A space within a space: the Campfire collection (lounge seating, lighting and tables) gives student teams a comfortable place to meet and collaborate, along with helpful tools for collaboration.

- At the Paper Table, students can scribble and brainstorm, draw and take notes and then peel off the top sheet and take it along.
- The Big Lamp provides a warm light that defines a small, cozy area within the larger floor plan.
- Movable Alight seating makes it easy to get comfortable in this small group area.
- Campfire lounge seating and screens define a space within a space. Translucent screens let others know the space is occupied.

Grand Valley State University (GVSU) is building the Mary Idema Pew Library Learning and Information Commons, a whole new approach to the college library. “We’re planning an enriched environment where students can continue the work started in the classroom and add a dimension to learning that a classroom doesn’t always offer,” says Lee Van Orsdel, Dean of University Libraries at GVSU.

As part of the planning process, Steelcase partnered with GVSU and design firm SHW to design, prototype and study spaces designed to support students working individually and in small groups: one with group worktools (e.g., portable whiteboards, mobile tables and chairs, wall-mounted storage shelves, access to power, and defined team areas), and another with a mediascape setting, where people can plug in laptops and simply press a “puck” to show information on two integrated flat screens, along with similar group worktools as in the first space.

Similarly, a team-space prototype with mobile tables, mobile chairs and other tools was popular for individual and teamwork by students using laptops and an array of digital and analog materials. The lead designer for the library, Tod Stevens, partner of SHW Group, an architecture and engineering firm specializing in educational environments, says, “When the library put workspaces near the windows and in other attractive spaces that used to be taken up by shelves of books, the gate count went way up.”

He notes that team spaces are a key reason students come to libraries: “It’s where they can find resources, get help and work together on projects.”

Steelcase researchers prototyped a 120-degree workstation that accommodated varying numbers of people throughout the day. In fact, individuals often shared the work setting with pairs, as in the photo (left) of two students working together on one corner while individuals work alone at other places in the same setting.

“Environment matters to students. Many don’t have a place to study, so they come to the library.”

LEE VAN ORSDEL, DEAN OF UNIVERSITY LIBRARIES

“Environment matters to students. Many don’t have a place to study, so they come to the library.”

As libraries offer more services and space for students, it’s important that they clearly communicate these resources. “Universities have not made their services seamless. We’ve compartmentalized them into pedagogical areas where they’re taught: English, writing, research, technology, speech, etc.,” says Van Orsdel. “The defining or central construct of the new GVSU library is a knowledge market that puts together, in one place, right in the path of the students, the resources to build all the skills employers tell us are critical in the workplace: writing, speaking, presenting and research. Students manage their own learning, choosing the type of help they need when they need it.”

Books are not going away, however. The library will hold 150,000 books in open stacks and another 600,000 in an onsite automated storage and retrieval system when it opens in 2013.

“Environment matters to students. Many don’t have a place to study, so they come to the library. In the past, life was more formal, society wasn’t as noisy. Now there are so many distractions that the library is often the only place where you can find a distraction-free environment,” says Van Orsdel.
what we observed

Wi-fi and portable technology bring information and communication to the remotest corner of the campus, making any space a potential learning space.

Students working in teams often vacate classrooms for spaces that better support group work.

Lounge areas are comfortable but typically designed for a single purpose.

Hallways often lack seating and worksurfaces where students and teachers can work before or after class.

Tech-wielding students need access to power, yet buildings typically don’t provide enough outlets.
every space is a learning space.

Learning can, and should, happen everywhere on campus—from the classroom to the library to faculty offices. In between these destination sites are lounges, hallways and other informal areas that can be so much more than transition spaces. They can be flexible, friendly learning spaces for individuals and groups. All smart ways to better leverage valuable campus real estate.

Lounge spaces also should be used as great attractors, spaces where students can meet and work with others and build that most precious of campus commodities: a community. These spaces are remarkable for their energy and activity; even a small lounge area can buzz with the enthusiasm of a small team at work or a few students engaged in animated conversation.

To make any lounge space a learning space, consider each space in terms of control, comfort and collaboration.

**Control.** Allow students a measure of control over how they use the space, where furniture can be positioned and how it’s used. To support students as they work in groups, pairs and individually, offer spaces that work for both collaborative and solo study. Wi-fi is a given; power access should be, too. Today’s students tote laptop and tablet computers, mobile phones, and other portable devices and are constantly looking for places to plug in.

**Comfort.** Traditional soft seating and hardwood hallway chairs are limiting and typically poorly suited for the work done in today’s lounge spaces. Learning involves a variety of postures: stand-up conversations, groups gathered in discussion, a long project work session around a table covered with materials, etc. People are most comfortable (and most productive) when they can move in their chair and still have good support and when furniture easily adjusts to suit various workstyles and postures.

**Collaboration.** A frequently missed opportunity with lounge space is to make it useful for the project work that has become integral to so many courses today. Students need tools that support collaborative learning both before and after class: methods for sharing digital and analog content; tools for informal brainstorming such as whiteboards and tackable surfaces; and worksurfaces that accommodate computers, books and other materials.

Lounges and other intermediate spaces are often in open areas, so seating and worksurfaces can take many forms, from stacking chairs and meeting tables to ergonomic task chairs and mobile project tables. Seating for collaboration is especially useful since it’s designed to support impromptu communication and information sharing.

"Our hallway lounge/collaboration space is the one place on campus where you'll always find people, even during semester breaks."  
UNIVERSITY DIRECTOR OF PLANNING AND CONSTRUCTION
Leveraging real estate in lounge spaces, hallways and common areas is simple: give users the means for control, comfort and collaboration. These attributes can change the simplest lounge space into a multipurpose workspace.

**CONTROL**

- Furniture should support the various postures students use while studying and working: standing, leaning, working at a table, seated in group discussions, hunched over a keyboard, etc.
- Mobile tables, chairs on casters, seating that nests or stacks, and portable whiteboards let users set up quickly for the work at hand.
- Students and teachers typically have to quickly vacate a room at the end of class to make way for the next group. Small collaboration spaces located outside the classroom invite students to continue class discussions.
- Informal seating areas near classrooms give teachers convenient places to provide timely feedback.

**COMFORT**

- Connecting corridors with daylight-streaming windows are natural people attractors and can be easily equipped for study with tables, booths and comfortable seating.
- Students fill booths first because they offer larger worksurfaces and privacy for users.
- Power to the people: it’s almost impossible to provide too many power outlets for today’s tech-loving students.

**COLLABORATION**

- Large, centrally located public spaces are a college’s public squares: they provide a sense of community, natural light and oftentimes convenient study locations near classrooms.
- Whiteboards and lounge seating with tablet arms or small worksurfaces help define smaller, intimate spaces within a larger environment.
- Portable whiteboards are inexpensive yet helpful tools for groups creating and evaluating content.
- Small project rooms located near open areas provide workspace for student teams.

Whether students need focus time, team time or me time, Campfire offers them the choice. The furniture moves easily, so students can rearrange it for the big group collaboration or to handle studying with two or three of their friends.
These lounge space application ideas transcend the traditional, single-purpose couch space. These are lounge areas that support resting, socializing, learning and working—true multipurpose spaces. Comfortable seating is important, but so are worksurfaces, whiteboards and power connections. Rethinking and reconfiguring lounge areas in hallways, atria and other public spaces creates more learning spaces out of the same real estate footprint.

**CONTROL**
This lounge space offers students both choice and control over their space. A majority of the space can be rearranged by students in order to support various activities that take place in a student lounge.

**COMFORT**
Built for comfort, this lounge space offers a variety of spaces with soft lounge seating.

**COLLABORATION**
Spaces intentionally designed for collaboration make this student lounge an effective space for teams to meet in.
collaborative choices

From standing-height tables to collaborative seating, this lounge provides students a variety of spaces to choose from.

The Campfire Big Table can be used as a meeting place or a workstation for six people. It comes with a full top or is available with a technology tray and power for a great place to power up and study.

The Campfire collection provides spaces with a wide range of private or open solutions. Here, a more private space offers students a getaway from the other, more public lounge spaces.

The i2i seating is designed for collaboration, offering students the ability to orient themselves to their fellow collaborators without taking away their focus or sacrificing comfort.

Social space

A highly social lounge space where students can intentionally and by coincidence connect with faculty or fellow students.

The Bob lounge chair offers a more modern design, giving this lounge space a unique style of its own.

The Bob chair with tablet arm provides students the ability to shift, focus and collaborate.

what we observed

Students are as likely to use a café for relaxation, socializing, and individual and group study as they are for dining.

Traditional dining halls with serving lines are being replaced by more open, interactive environments that are more residential in scale.

Gen Y students tend to graze. They consume four smaller meals daily and at nontraditional times, so café hours are longer.

Teaching assistants and adjunct faculty use cafés for class prep and office hours. Lack of power outlets is a common complaint.

Students work individually and in groups in cafés. But when they want to eat or study alone, sitting at a large table makes them feel self-conscious.

Students enjoy using cafés as places to socialize and be entertained, to escape from the rigor of their academic lives.

Cafés are often a focal point of environmental sustainability, with an emphasis on materials sorting and recycling.
dining, relaxing, socializing, studying.

Café spaces are sales tools for colleges in the race to keep up with peers in recruiting and retaining students. The design of the space and food services are geared for the Gen Y audience, which values premium brands for everything from clothing to colleges. This generation selects a college in part on the prestige of the institution, and they associate prestige with nice facilities.

As a result, the institutional dining hall concept is disappearing as schools update old facilities and build new café spaces where the food is made fresh to order, and the furniture, lighting and art are contemporary and welcoming.

To support the emphasis on quick, “grab-n-go” food service and the many uses of café space, offer a mix of booths and stand-up height tables, as well as two- and four-person seated-height tables. Outside courtyard spaces with tables and chairs are typically included even in northern climates.

As colleges cater to a generation used to convenience and a palette of options, our research suggests that the new strategy for the café space consider three key factors: community, comfort and study.

Community. Cafés are places for gathering at any time of day or night by students, faculty and staff. Adjunct faculty members use them for office hours. Students socialize, dine, relax, study and work on group projects. A mix of open, often loud spaces and places for quieter study are needed to meet the needs of the community at this campus crossroads.

Comfort. Students like spaces that are bold and colorful, so colleges are using seating fabrics, carpeting, art and graphics to create unique, fun café spaces. Students traditionally respond to a modern aesthetic and high-quality furniture in classrooms, common areas and cafés. They want a variety of seating and table options for the different ways they use cafés.

Study. The café’s role as a transitional or in-between space exemplifies how learning happens everywhere on campus today. Wi-fi is expected in the café, as is access to power. But there are often not enough power outlets for today’s technology-laden students and faculty.

Touchdown computer kiosks and benches are helpful to students for checking class assignments and grades, communicating with faculty, and getting a bit of work done on the way to and from class.

Tables aren’t just for lunch trays anymore; they’re worksurfaces for laptops, smartphones, books and everything else a student can load into a backpack. Consider providing mobile, comfortable seating; power access at table height; and screens that provide some privacy.

what we heard.

“This is where my friends and I hang out. It’s bright and lively, not dreary and dead.”

STUDENT

“I feel like when I’m outside of class, it’s a different kind of learning. It’s more about learning about different types of people, and you learn by talking with them.”

STUDENT

“I give assignments where students have to collaborate with one another... they do not pick their own partner. It allows them to have a dialogue outside of class.”

PROFESSOR
Cachet seating lends comfort and style to any café: it’s lightweight yet durable, easy to clean; even stackable. Also 99% recyclable.

**tips for café spaces.**

Cafés are used by everyone, from students and faculty to staff, visitors and vendors. They need to be welcoming spaces that work for a variety of uses, from dining and socializing to individual study and group work.

**COMMUNITY**

1. A mix of spaces, quiet and loud, public and somewhat private, helps support the many ways cafés are used.
2. Booths are hard to beat for group dining, socializing and studying.
3. Mobile, collapsible tables support many uses and store easily.
4. Café spaces are often used for large meetings, and stackable seating and nesting tables adapt to different room configurations.
5. Use furniture that contributes to a sustainable environment. LEED certification is being touted widely in student recruiting.

**COMFORT**

1. Maximizing access to daylight is not only a student attractor but can also contribute to LEED certification.
2. Provide seating for different postures: primarily chairs and stools but also some lounge seating.
3. New seating fabrics combine stain resistance and durability with a soft feel.
4. Lightweight tables can be grouped when students need to work together.

**STUDY**

1. Use furniture to build community and foster interaction.
2. Food and beverage spaces require stain-resistant, durable finishes.
3. There are never enough power outlets for today’s heavy users of technology.
4. Provide small, private spaces for groups and quiet study adjacent to larger, open cafés.
5. Standing height computer kiosks or benches of small computer stations are ideally suited to students who need to quickly access the college intranet.

learn more at steelcase.com/educationsolutions
More than simply café spaces, these are places for community-building and spaces of comfort, as well as places where students study alone and with others. That’s how students prefer to use cafés, so why not support them? Faculty and staff will appreciate these spaces for meeting with colleagues, preparing for class or holding office hours with students. In addition, the applications here leverage the café’s role as a focal point for the institution’s commitment to environmental sustainability.

COMMUNITY
This café floor plan is dedicated to building community on campus. The large center court is designed as the social hub of the space, with a variety of inviting spaces for students to choose from.

COMFORT
Near the outlining walls is where soft seating and other booth-like spaces are offered.

STUDY
Things like large worksurfaces and access to power offer students the ability to continue their studies before or after a meal. Some spaces are more private, offering students a variety of study nooks throughout the space.
Faculty offices: concentration, contemplation, collaboration.

What we observed

Faculty offices are set up for private, individual work but often need to function as reception areas, collaboration spaces, storage closets, research centers, etc.

Shared offices are not uncommon, especially for nontenured faculty. But having to juggle schedules, multiple users and varying workspace needs often results in the offices going unused—or ending up being so crowded that actual work cannot be accomplished.

Faculty enjoy interacting with peers and sharing ideas and their own lessons learned as a means to develop communities of practice.

Offices are not well-equipped for collaboration—few markerboards, projection devices or easily shared screens.

Social spaces lack amenities (copiers, coffee, supplies, etc.) and often go unused by faculty.
multipurpose academic space.

The typical professor’s office was designed in a bygone era as a private inner sanctum and repository for printed material. Amid bookshelves and papers stacked high, the instructors hunched over student bluebooks and research papers. When computers arrived, professors merely stacked stuff higher to make a little room on an already overcrowded desktop.

**How teachers work.** A variety of pedagogies, teaching styles and new technology are demanding a new approach to faculty workspace. Instructors meet frequently with peers and students who are often carrying tablet computers and other new technology, making tools like multiple screens to share a necessary tool to consider. Running out of room in the office, instructors try to hold private conversations standing up or in the hallway outside their office while everyone nearby can listen in. It’s no way for collaboration or student mentoring to take place.

Inside their offices, instructors have their own way of organizing information: there are filers, pilers and arrayers. Filers organize information in orderly folders organized in file drawers. Pilers are just like they sound: they can practically hide behind towering stacks of materials. Arrayers spread out information across different worksurfaces during the day so nothing is ever out of sight.

An instructor’s continual process of teaching, researching and learning is now as much a team sport as an individual effort. Consider the design of a group of faculty offices, or neighborhood, around three core activities: concentration, contemplation and collaboration. These are not separate areas of the office, but fluid zones designed to support a range of activities.

**Concentration.** This area centers on a worksurface with nearby files and shelves geared for the way the instructor stores information. An ergonomic chair is a necessity for long hours of concentrated work. There may also be a guest chair for a longer discussion with a colleague or student, as well as a flat screen to display digital content.

**Contemplation.** A highback adjustable chair with a footstool and a space divider such as a mobile screen create a place for reading and quiet reflection. This is a protected work area just a few steps away from the front porch, so the instructor’s work in process, often involving confidential information, is protected from visitors. It’s a valuable refuge from an increasingly complex and fast-paced workload.

**Collaboration.** Chance meetings with colleagues for idea sharing are the lifeblood of an academic. The faculty office entry area can host these collaborative discussions without intruding on the officeholder’s private space; think of it as a front porch. Provide a markerboard, a stool or guest chair, a small worksurface, and a monitor arm for the flat screen so instructors can easily share digital content and engage quickly. This area is ideal for office hours, when instructors deal with a parade of students seeking assistance.

College faculty still consider a private office and its size as reflections of their length of service and position. Yet institutions can create more versatile, effective and comfortable faculty offices in a smaller footprint by planning offices with these three essential zones.
This private office works harder and smarter than ever before by creating specific zones for concentration, contemplation and collaboration.

tips for faculty office communities.

Plan a faculty office space as a part of a neighborhood that supports three core activities: concentration, contemplation and collaboration.

**CONCENTRATION**

- Freestanding furniture systems adapt to the wide variety of faculty office shapes and sizes, with components to provide worksurface, storage, meeting support, privacy, writing surfaces, worktools support and definition for different zones in the office.
- Ergonomic task chairs support long sessions correcting papers, working on research, writing, etc.
- Secondary worksurfaces that are mobile can do yeoman’s work as a collaboration table, a place to array information, additional storage, etc.
- Benching worksurfaces or small-footprint workstations provide much-needed space for part-time faculty, and their open design allows for more interaction with other faculty.

**CONTEMPLATION**

- Faculty members often choose their office furniture, and furniture systems can provide the function, versatility and aesthetics (wood and wood/steel blends) that meet both faculty desires and institutional standards.
- Small huddle rooms located near open-plan workspaces for contingent faculty provide them with private places for phone calls, student conferences, etc.
- Chairs intended for contemplation should do more than just recline; they should provide good ergonomic support and have easy-to-use adjustments.

**COLLABORATION**

- An office front porch creates a working buffer zone: a standing-height table hosts impromptu meetings, while confidential materials reside inside the concentration and contemplation zones.
- A faculty resource area provides a place where faculty can prepare for class and meet with students and peers without traveling far from their private offices. Coffee, copy machines and conversation help draw people to the space.
- A work setting allows colleagues to share digital content from laptops, tablet computers, etc., greatly facilitating the collaborative process.
- A teacher needs a writing surface; portable whiteboards are ideal and at times necessary tools for faculty office neighborhoods/communities.
Innovative ways to create faculty offices that support the three key types of work that go on in these spaces: concentration, contemplation and collaboration:

**CONCENTRATION**
Space for work that needs quiet focus, such as research, reading, grading papers, etc. Typically includes a personal desk, storage and a chair suitable for long hours of task work.

**CONTEMPLATION**
An area just beyond the private concentration space that supports individual contemplation or a discussion with a peer or student. It’s a place for thoughtful contemplation in a more relaxed setting.

**COLLABORATION**
A common area designed for collaboration with peers or students, or a front porch area at the entrance to a private office. It welcomes others while keeping files and papers confidential.
faculty office
A private office for more tenured faculty includes zones designed for concentration, contemplation and collaboration.

Steelcase Privacy Wall is a high-performance moveable wall, offering a refined aesthetic to any faculty space.

media:scape in the private office offers faculty to share and display digital content with students or peers.

Storage here leverages vertical real-estate and provides space for personalization.

focus and collaborate
This space is for those instructors who are in and out of the office, moving between teaching classes and catching up on individual work.

This combination of Answer bench and an adjacent media:scape offers staff the ability to work individually or collaboratively within a few feet.

media:scape with HD videoconferencing creates inviting, multipurpose spaces. This optimizes real estate by allowing local teams to use the space effectively, even when the video is turned off.

At Mount Royal College in Calgary, Canada, the college’s International Education Department had grown rapidly. Like programs at many colleges and universities, parts of the IE program had sprouted wherever they could find space—in different buildings, even on different campuses. Yet much of their work was cross-functional. “We wanted to create a better work environment that would bring everyone together,” says Lorna Smith, department director. “We needed to remove the silos between groups, and we didn’t believe we could do this by using a traditional office model.”

“Traditional workplaces primarily support the formal structure of an organization and the explicit processes—what people say they do,” says Robyn Baxter, Steelcase applied research consultant. “Our methodology allows designers to create workplaces that support the informal networks that allow real work to happen, what people really do.”

Working closely with project architects from Kasian Kennedy Architecture and Design, the Steelcase team held a strategic intent workshop with IE leadership.

As the new department took shape, the spaces earned names, both to explain their purposes and to make them destinations. Reference materials and display technologies are at the Trading Post, which sits beside the Knowledge Gallery, an interactive public area. The central gathering spot is the Information Promenade. Mentoring and coaching nooks are places to meet one-on-one.

Diverse spaces support different needs and workstyles: collaboration and concentration, visibility and privacy, planned and unplanned, permanent and temporary.

**Surveys of instructors reveal a changed organization:**

<table>
<thead>
<tr>
<th>Percentage</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>87%</td>
<td>believe the new workplace enhances their effectiveness</td>
</tr>
<tr>
<td>98%</td>
<td>are satisfied with their access to relevant colleagues</td>
</tr>
<tr>
<td>95%</td>
<td>are pleased with space for formal and informal meetings</td>
</tr>
</tbody>
</table>

The IE space has become a Mount Royal showpiece. “People seem to be really proud of being able to work in this innovative and creative space,” says Judith Eifert, college vice president of academics. “From an institutional perspective, it’s a very efficient and cost-effective use of space.

“Steelcase really helped us understand how space can be used strategically, and how a well-designed work environment can help organizations meet their business goals.”
what we observed

Real estate costs are a continuing concern for colleges and universities; leveraging every space is a priority.

The growth of collaborative work means workers can no longer afford to work in silos; schools are looking for ways to improve worker interaction.

Institutions are constantly competing for talent; finding, engaging and retaining top staff and faculty are ongoing challenges.

Colleges are building their brands in a more competitive marketplace; real estate must support the effort by furthering the institution’s culture and brand.

Environmental stewardship, including LEED certification, is of importance on campuses to students, faculty and staff.
admin offices: harder-working spaces.

Costs are rising everywhere, and educators are dealing with increased demands from students, faculty and staff. Given an institution’s investment in real estate, it’s not just learning spaces that need rethinking. Every space on campus, including administrative office spaces, needs to work harder and deliver more per square foot. That means using space to maximize productivity; attract and engage workers; communicate a school’s tradition, brand and culture; and foster more collaboration.

The vast majority of workers say having an office that helps attract and retain knowledge workers is important, according to the Steelcase Workplace Satisfaction Survey, an ongoing global survey of attitudes on work issues that has engaged nearly 23,000 respondents at 133 companies. It’s the single biggest issue not being addressed—and it’s been that way every year since the survey began in 2004.

In the past, most work was individually focused, but today the reverse has become true: 82% of white-collar workers feel they need to partner with others throughout their day to get work done. Knowledge work has become a social activity where workers build on each other’s ideas and together create something new.

Reducing office footprints has an upside: density increases interaction. People in workspaces along main circulation routes have nearly 60% more face-to-face communication with other team members than do those in spaces with low visibility.

Teams have to be able to work together and collaborate so spaces that are reconfigurable and suitable for interaction and information sharing are essential in a collaborative workplace, people are more aware of what colleagues are doing, they have easy access to each other and it’s easier to engage with others in conversation.

An essential part of collaboration is sharing information, and that gets tricky when technology is involved. Projection surfaces, the ability to show a computer screen to others, a means to transfer files simply—these are all concerns in building a truly collaborative workplace.

what we heard.

“Collaboration has been a big topic for the last 10 or 15 years, but people are realizing the different types of collaboration we need to support.”

OFFICE WORKER

“More emphasis on more informal, casual spaces for informal get-togethers and cross-fertilization, and less about planned, formal meetings.”

OFFICE WORKER
Both c:scape and media:scape create a space that works harder and smarter than ever before by optimizing real estate and offering dynamic collaborative spaces.

Hardworking administrative office space isn’t just smaller—it’s smarter. Here are ways to make it so:

1. Involve the staff in the planning and design process; they will more quickly embrace workplace changes and, when change happens, become more productive sooner.

2. Space saved by decreasing individual workspaces should be returned in shared spaces: impromptu meeting areas, project rooms and/or huddle rooms. Tools in these spaces for information sharing, worksurfaces for group use and vertical surfaces for making work visible are important for collaboration.

3. Make group spaces tech smart: the best-used group spaces in any workplace are equipped with power outlets; projection means; and tools for accessing, sharing and displaying information.

4. Encourage ad hoc conversations with casual places for thinking and brainstorming.

5. Lower panel heights provide more access to daylight, greater visibility for everyone on staff and more open communication.

6. Consider benching applications—they help span boundaries that keep communication and collaboration free and easy.

7. Make good use of vertical space in workstations for storage, work tools and technology.

8. Never underestimate the power of food and beverage to attract people and get them talking. Create a destination café or coffee bar area; these areas support learning, socializing and collaborating.

9. Rethink private offices, which usually house the highest-paid workers. As with faculty offices, these offices should be planned for three areas: a zone for conversation by the door, one for collaboration farther inside and one for concentrated work located farthest from the door.

10. Use space to foster change, where people can try new ideas and fail safely behind the scenes; project rooms are good places for risk taking and trying out new things.
greater expectations.

Today’s workplace has to maximize the use of real estate, attract and engage workers, communicate brand and culture, and foster collaboration and innovation. To help combine these ideas into reality, we offer a floor plan based on insights from designers, architects and Steelcase researchers on how to plan these harder-working spaces.

OPTIMIZE REAL ESTATE
A compressed individual space opens up an opportunity for more collaborative spaces, creating a culture of collaboration and innovation.

FOSTER COLLABORATION
Additional collaborative spaces help people connect to the culture of the institution, to the tools they need to be effective, to their information sources and to each other.

ATTRACT AND ENGAGE WORKERS
Create spaces that give employees a sense of control over their day; spaces for individual work or collaborative work, spaces that are private or social.

REFLECT BRAND AND CULTURE
While it’s important to communicate your institution’s brand via use of logos and graphics, that’s only a part of the solution. Think about the types of spaces you offer, the color palettes, the flow of the space and how everything makes a statement about what your institution stands for.
customer story.

UNIVERSITY OF CALIFORNIA, SAN DIEGO, CA

The Housing | Dining | Hospitality department (HDH) at the University of California, San Diego, houses over 11,000 students, staff and faculty, so it’s quite adept at organizing the living and working arrangements of groups of people. But the workspace for the department’s own staff was another story.

The HDH group’s nearly 600 employees were spread out across the campus, often working in “temporary” trailers for years. “We had no real headquarters for our department. To do business with us you had to go to as many as 11 different locations. We needed to bring together the backbone operations, break down the silos, help people communicate and collaborate, and make doing business with us more convenient for our customers,” says Mark P. Cunningham, the department’s executive director.

The solution was a new work environment with more open, collaborative workspaces.

The number of private offices was cut in half, and a variety of spaces were created for groups ranging from two to 12 people.

The main furniture elements are c:scape, an innovative Steelcase system, and media: scape, an integrated furniture and technology solution that reshapes how people collaborate. c:scape uses a simple set of components (beam, desk, low- and mid-storage, worktools and screens) to create user-centric spaces. Workers can control privacy without creating barriers, and the 48”-high screens let HDH staffers see and be seen by others. “It’s a unique system that meets the needs of the department and the needs of the building, too,” says Mark Nelson, an architect and project manager at UC San Diego.

“c:scape not only met our criteria but in many ways exceeded them. It’s much more friendly furniture. We can route cabling so it’s hidden, and the environment is very open and collaborative,” says DeAnn Coombs, assistant director of procurement and contracts. The surface of the desk slides forward to reveal the connect zone, which offers easy access to power, data and cord management.

HDH’s new workplace exemplifies the environmental stewardship strategies of the university
• mediascape furniture components are Silver Cradle-to-Cradle™ certified by MBDC with standard options and finishes
• wiring and cabling are PVC- and halogen-free, as well as RoHS compliant
• c:scape is level 2 certified to the BIFMA e3 sustainability standard
• mediascape technology components are RoHS/WEEE-compliant and carry the Energy Star® rating

Open workplaces without high panels often lack adequate storage. “But c:scape has components that stay low and give people enough storage and room to personalize,” says Nelson.

HDH uses mediascape to make sharing information easy for groups of two to eight people. In any of the department’s seven mediascape spaces, HDH employees simply connect one of the mediascape pucks to their laptop and everyone can view what’s on their computer via the integrated monitor at the table. To switch between laptops, they just touch the puck. The large mediascape table is especially popular with large groups. “There’s something about a circular table, the easy connection. It’s packed all the time,” says Cunningham.

The combination of a more open workplace, c:scape and mediascape has proven effective more quickly than even Cunningham expected. “We thought it would take six months to a year for people to embrace this new office,” he says. “It’s been just three months, and information flows faster now, and that’s a huge benefit. You see people working with mediascape, and people walk by and they ask questions. We had no idea it could work this well, but it seems so apparent now. It’s amazing the way you can construct a community with a building and furniture.”

Says building manager Athena Simpson, “This furniture has without a doubt increased productivity, improved staff relations and boosted morale.”

Coombs says the collaborative atmosphere rubs off on visitors, vendors and colleagues from other departments. “People all the time say, ‘Oh, this is such a great environment!’ It makes them curious about what we’re doing. People in other divisions used to come in and go out of purchasing quickly. Now they ask what we’re doing and they’re more appreciative of what we do.”
product solutions.
Max Stacker® by Steelcase

**LIST PRICE** Starting at: $193

**FEATURES AND BENEFITS**
- Soft comfort of co-molded TPU and glass-filled nylon chair body
- TPU offers the comfort of upholstery without the cost or maintenance of a more upholstery
- TPU is soft and flexes with user contact points for individual comfort and support
- TPU is durable material that is inherently resistant to stains and easy to clean
- Naturally CAL 133 compliant
- Stacks 2-high; 21-high on casters; 15-high on glides
- Structural steel frame and contoured plastic seat and back
- Stackable 12-high on the dolly; 45-high on a dolly
- Reinforced steel frame for durability
- Fully upholstered outer back

People. Planet. Profit

Steelcase aspires to create enduring value for people, planet and global economies by fully leveraging all our assets, relationships and resources.

People
We think about the communities where we work, live and do business—which is nearly everywhere in the world. By aligning our goals for people with our planet and profit aspirations, we’re building the foundation for gains that we hope will be far-reaching and enduring.

Planet
By rethinking our business systems and designing our products to avoid negative impacts on humans and the environment, we contribute to a sustainable future for the planet and its people. We commit to advance our practices through continuous learning and building partnerships with our customers, business partners and environmental thought leaders to optimize our performance and contribute to the science and practice of sustainability.

Profit
First and foremost, we aim to bring value by working together with our customers to create workplaces where their people love to work. It is also our responsibility to provide value to our shareholders so we can continue to reinvest in the business and generate new solutions to address customer business challenges.

Whether you design them, manage them, or work in them, we can help you create high performance, sustainable work environments. We study how work gets done and how great spaces can help. Those insights are embedded into every product and service we offer. Our interior architecture, furniture, and technology solutions help organizations build their business, reflect their brand, and support their culture.

We’re unique from everyone else in our industry, in that we offer products and services founded in a research methodology that focuses on the user, and how they really work.

We are committed to maintaining our leadership role in terms of sustainable responsibility, and we are equally committed to the customers and designers we work with. Our job is to make your job easier. Our passion is helping you Love How You Work®.

Global Dealer Network
With a network of over 800 experienced dealers, we can help you create high performance, sustainable workspaces, anywhere in the world. Our network offers you local expertise with global reach. Whether your project is across town, across the country, or across the ocean, our dealer network will coordinate the logistics so you don’t have to. It’s local expertise with a global reach.

Steelcase and Dealer Services
Our extensive range of services can help you with all of the phases through which a high-performance environment evolves through: Measure. Explore. Plan. Provide. Manage.

Measure—helping you know if your workplace is keeping pace.
Explore—helping you link your business goals with the best workplace strategy.
Plan—helping you find a solution that addresses your needs.
Provide—helping you every step of the way, from project management to move management.
Manage—helping you maintain an effective space for today and tomorrow.

Warranty
Steelcase and your Steelcase Dealer are totally committed to providing you a great experience and great products. We back that up with one of the industry’s best warranties and a problem resolution process that ensure that any problems that arise get addressed quickly.

As part of our commitment to sustainability, this brochure was created using an on-demand printing process, enabling us to digitally print materials only when necessary.

For high resolution images of these products and more, contact your local workplace consultant or dealer representative.
